

Calling All Young Engineers...

Interested in making things? Things that work - machines, engines, boats, planes, robots, indeed anything mechanical or electromechanical?

There is a competition just for you, with cash prizes, vouchers to spend on tools and materials and a very swish trophy! Winning (or even entering) will look good on your future CV or Uni application ... and it's fun building your entry anyway, win or lose.

The winners and runners-up are invited to a fascinating venue for the awards ceremony - it might be a science/engineering museum or a working miniature railway, where you might get to try your hand at driving a locomotive. What are you waiting for?

Your entry could be any type of miniature engineering or tooling that you have made, including boats, planes, cars, railway locomotives, a 3D printer, robot arm, remote-controlled dinosaur... anything which demonstrates skills in mechanical or mechatronic engineering (whether 'finished' or well-underway).

For more information and a look at some past winners, see our website at fmes.org.uk and search for the 'young engineers' page or scan the QR code.
